WORK EXPERIENCE

SAP

UX Research Intern

Palo Alto, CA

Jun 2025 - Present

- **Led end-to-end research** for the Joule Mobile GenAI Assistant and Mobile Design System teams as sole researcher — originating study designs, owning execution, and delivering findings that shipped directly to product.
- **Drove roadmap influence** by reframing the Joule Voice executive brief from "how to build voice" to "where voice earns its place" — resulting in scope reduction of speculative integrations and **cross-org alignment on evidence-based use cases**, demonstrating the ability to shape strategic direction beyond individual deliverables.
- **Delivered a "stop ship" recommendation** on a VP-prioritized Retry/Regenerate feature after 8 customer interviews revealed 100% of users repaired AI errors conversationally — **redirecting engineering toward higher-value patterns** and demonstrating proactive identification of where product assumptions break.
- **Increased Mobile Design System satisfaction 12.6%** (3.71 → 4.18) in one quarter by diagnosing root causes of team abandonment across 19 interviews and a cross-functional workshop; findings shipped directly in v25.04 and **prevented ~8 weeks of engineering rework**.
- Led multi-phase mixed-methods program (n=100+) combining unmoderated usability testing (UserZoom), moderated interviews, and A/B preference testing

ClariMed

Human Factors Intern

San Jose, CA

Jan 2025 – May 2025

- **Reduced safety-critical use errors 25%** through formative and summative usability validation for FDA-regulated medical devices; synthesized 82 usability issues into risk-prioritized design changes that **directly accelerated regulatory submission readiness** — applying rigorous failure-mode thinking to high-stakes UX.
- **Influenced engineering and regulatory decisions** through risk-based usability analysis, applying IEC 62366 and ANSI/AAMI HE75 standards to translate behavioral findings into actionable design specifications.

San Jose State University

Graduate Research Assistant

San Jose, CA

Sep 2023 – May 2025

- **Originated and directed trust calibration research** for autonomous systems in partnership with Honda and Amazon; **reduced user response time 15%** in high-cognitive-load simulations using multimodal physiological measurement (eye tracking, GSR, HRV, motion capture).
- **Translated behavioral findings into HMI design guidelines adopted by engineering partners**; designed and executed studies using MATLAB-based protocols across 100+ participants — demonstrating the voice-of-the-user bridge from insight to implementation.

EDUCATION

San Jose State University

Master of Science in Human Factors and Ergonomics (UX Concentration)

San Jose, CA

2023-2025

University of California, Santa Cruz

Bachelor of Science in Cognitive Science

Santa Cruz, CA

2021-2023

SKILLS

Research Methods: Mixed Methods, Usability Testing, Moderated & Unmoderated Interviews, Diary Studies, JTBD, Ethnography, A/B Testing, Failure-Mode Analysis

Tools: Qualtrics, UserZoom, Dovetail, UserTesting, Figma, MATLAB

Core Strengths: Independent end-to-end research ownership · Roadmap & stakeholder influence · Voice of the user · Proactive risk & failure identification
